Brain injury can occur internally anywhere at anytime due to stroke, aneurism, seizure or illness. No one is immune. Additionally, about 5.3 million Americans are living with a disability that resulted from a traumatic brain injury related to impacts from motor vehicle accidents, violence or accidents at work or play. People suffering from brain injuries have to regain lost skills that the rest of us take for granted such as writing or typing, conversing with friends, folding laundry, and shopping for groceries.

The Hickok Center for Brain Injury, with centers in Rochester and Newark, has been serving adult survivors of brain injury for over 20 years. The Center is a place where people with brain injuries can go to redevelop the skills they have lost, within the safety and support of people with similar experiences and professionals who understand their struggle. Members set their own goals, design their own programs and utilize our organization's staff in ways that are consistent with their own priorities toward independence and self-sufficiency. We invite you to visit [www.hickokcenter.org](http://www.hickokcenter.org) for more information about both our locations.
